### Service Interruptions:

- None reported.

### Remote/Community Isolations:

- None reported.

# WEATHER OF CONCERN

## Weather of Concern

- Two low pressure systems are moving into Southern California. The first has begun to move across Southern California and will be a warmer system than the second. It will bring approximately ¼ to 1 inch of rain with minimal snow impacts to the mountains through tonight. Snow levels will remain high.
- The second system is expected to bring another round of showers with snow showers on Saturday. Snow levels will likely impact mountain roads and passes including possible the I-5 corridor near the Grapevine.

## **Active Weather Warnings, Watches and Advisories by County:**

# **WEATHER SYNOPSIS BY REGION**

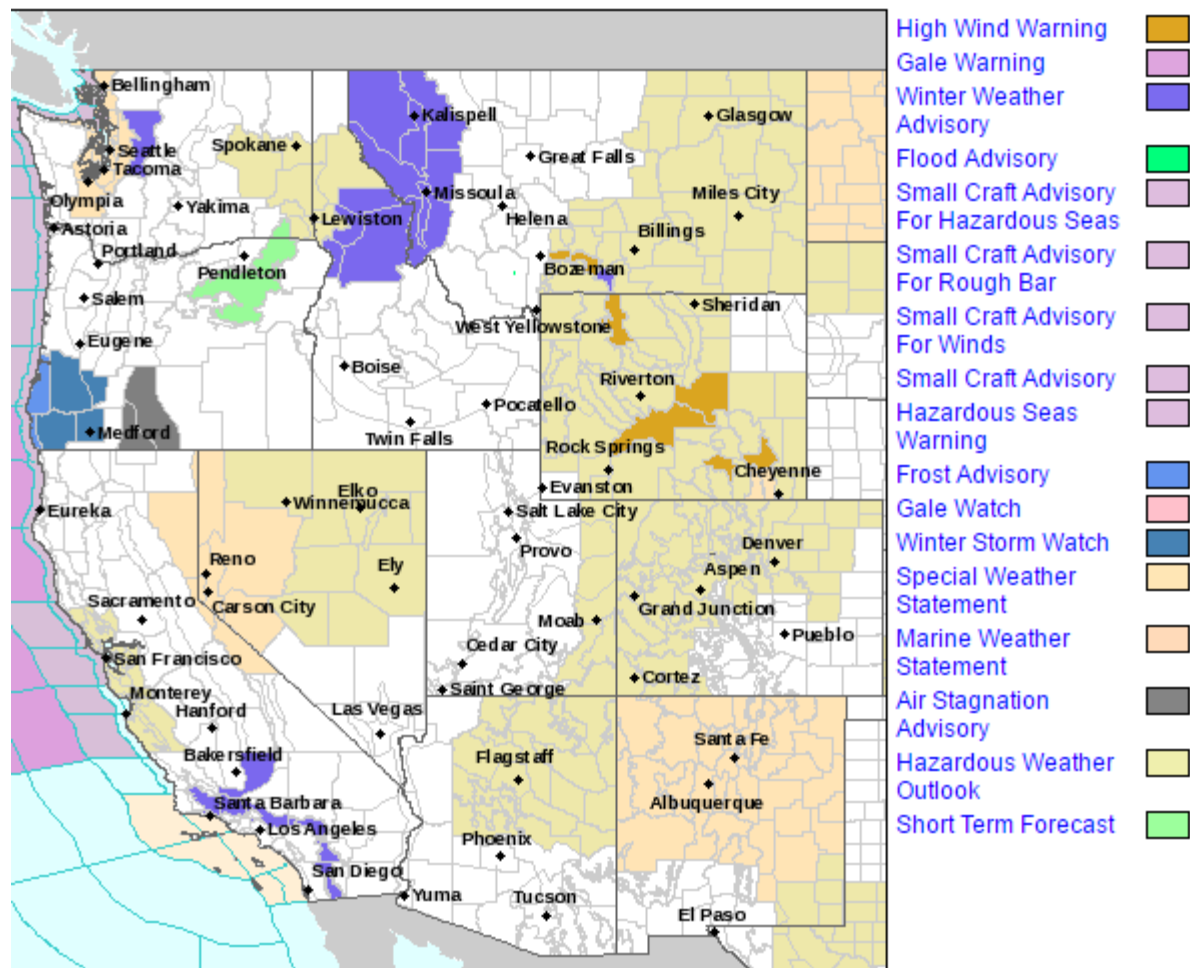

## **NORTHERN CALIFORNIA**

The weather pattern will begin to shift early this morning as a low moves into Southern California and a system drops south from the Pacific Northwest. The Southern California low will remain too far south to affect Northern California, but the low approaching from the north will bring some chance of rain or snow to the far northern areas during the day. As that system moves across this evening/overnight, more areas will have a chance of light precipitation. Snow levels Friday night will drop to around 2500 feet in the north and 4500 feet in the south late. High pressure will move in Saturday as the low continues to move out of the region and there will be some areas of gusty north to northeast winds develop tonight that last into Saturday as a result. A much colder, somewhat stronger storm will arrive from the north again New Year's Day and linger Monday. This system will bring precipitation mostly to the northern and eastern areas. Snow levels will drop to around 1000 feet or maybe somewhat lower for the northwest counties and possibly as far south as the very northern tip of the Sacramento Valley. The system will move slowly east Tuesday with showers lingering in the eastern areas. Cold air will linger over the region the middle of next week with some clearing skies, and rather chilly overnight lows of the mid 20s in the Sacramento Valley to just below zero in the higher mountain valleys are expected next Tuesday night and perhaps again next Wednesday night.

## **SOUTHERN CALIFORNIA**

A ridge of high pressure over California will cause temperatures to remain around 10 degrees above normal today with 50s to low 60s across the mountains, 60s to low 70s in the valleys of Central California, and 70s to low 80s in the valleys of Southern California. An area of low pressure approaching from the southwest will move inland bringing showers to the region today with most locations expected to receive between a quarter inch and an inch of rainfall. The snow level will be around 8,000 feet. Another low dropping south along the California Coast will bring additional showers to the area Saturday. Most of Southern California will receive between 0.50 and 1.50 inches of rainfall, while most of Central California receives between a quarter inch and a half inch of rainfall with this low pressure area. The snow level will drop to around 4,000 feet Saturday. A Pacific trough will bring scattered showers to the region at times Sunday through the middle of next week. Temperatures will be below normal Friday through the middle of next week. Westerly winds of 20 to 40 mph with gusts to 60 mph will surface across the wind prone mountain and desert areas at times Saturday through the middle of next week.
